Summary

David is interested in trying to better understand how the places in which individuals live interact with the outcomes that they experience over their life course. Key topics within this research include modelling and understanding neighbourhood effects, investigating how individuals and households locate in residential space and understanding how segregation develops and is maintained over very long periods of time. Crucial to this work is the notion that statistics can be used critically to challenge myths in the academic literature. David is also interested in more methodological problems including how neighbourhoods are represented and different scales and in different places. Recent publications include the first of a three volume edited series on neighbourhood effects work, published by Springer.

Biography

Lancaster University BA Hons Geography and Economics 2000
University of Leicester MSc in Geographical Information Systems (Dist)
University of St Andrews PhD Human Geography (2005)

Honorary Fellow, Technical University of Delft, The Netherlands

Fellow of the HEA

David has a University Research Fellowship for the academic year 2018/19 and is on research leave.

Teaching

David is a member of the Quantitative Spatial Science (QuSS) research group. When teaching he leads a third year option module "Ethnicities, social class, housing and the city" and co-ordinates the "Explanation, Causation and Longitudinal Analysis" module for 4th year MSci and Society and Space MSc students. Elsewhere he gives guest lectures for World in Crisis and Convincing Stories.
