Summary

Activities / Findings

I graduated from National University of Ireland, Galway with a BA in Commerce and continued my studies in University College Cork and was awarded an MSc in Health Economics. After, I worked on an orthopaedic study at the Institute of Child Health at University College London, before pursuing a PhD at Swansea University. My PhD provided me with the opportunity to work with linked data and the focus was on linking survey and health data in an investigation of disability and employment outcomes.

I took up the post as a Research Associate in Health Economics with the Bristol Randomised Trial Collaboration (BRTC) at the University of Bristol in September 2017. I am currently working on economic evaluations for numerous randomised control trials in the areas of urology, orthopaedics, chronic fatigue syndrome and well-being.
